Aim

What do you want to do/build?

- A system to predict which applicants should be interviewed

Requirements

Functional requirements

What does it do?

- Based on application data, make a yes/no prediction

Non-functional requirements (benchmarks)

How well does it do it?

- 80% accuracy in predictions
- Minimal human interaction
- < 1 minute for each application

Technical requirements

What tools/technology does it use?

- Predictions should be exportable to Excel
- Draw data directly from job sites

Stakeholders

Who is involved? Who is affected by your work?

- Applicants
- Hiring managers
- Job platforms

Stakeholder requirements

What do the people who use/control it need?

- Data to be kept securely
- Need access keys and properly-formed requests

Data source

Where will the information come from?

- Previous submitted applications
